# CEQA Initial Study - Environmental Checklist Form (Based on the State CEQA Guidelines, Appendix G Rev. March, 2010)

- 1. Title; Project Number(s); Environmental Log Number: Sanders Minor Subdivision (4 lots); 3200-20765 (TPM), 3910-03-15-006 (ER)
- Lead agency name and address:
   County of San Diego, Department of Planning and Land Use 5201 Ruffin Road, Suite B, San Diego, CA 92123-1666
- 3. a. Contact: Ashley Gungle, Project Manager
  - b. Phone number: (858) 495-5375
  - c. E-mail: ashley.gungle@sdcounty.ca.gov.
- 4. Project location:

Old Highway 80 & Pine Creek Road

Thomas Brothers Coordinates: Page 1237, Grid B/5

5. Project Applicant name and address:

James Sanders; PO Box 232; Brawley, CA 92227

6. General Plan Designation

Community Plan: Central Mountain Land Use Designation: 1 (Residential) Density: 1 du/ 1,2,4 acres

7. Zoning

Use Regulation: RR.25
Minimum Lot Size: 4 acres
Special Area Regulation: N/A

#### 8. Description of project

The project is a minor residential subdivision of a 32 acre parcel into four lots containing 6.22 to 9.44 acres net. The project site is located along Old Highway 80, just south of Pine Creek Road, in the Mountain Empire Community Plan Area, within unincorporated San Diego County. The site is subject to the General Plan Regional Category 1.5 Country Towns and Land Use Designation (1) Residential. Zoning for the site is RR.25 (Rural Residential). The site is currently vacant. Access would be provided by a private road connecting to Old Highway 80. The project would be served by on-site septic systems and groundwater. Earthwork will consist of balanced cut and fill of 13,200 cubic yards of material.

#### 9. Surrounding land uses and setting:

Lands surrounding the project site are used for residential single family homes (north and east), vacant residential estate lots (south) and State Parks (west). The topography of the project site and adjacent land is steep to rolling hills, with a wide valley immediately east of the project site. The site is located within 1 mile of Interstate 8 and is located along Old Highway 80.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Permit Type/Action	<u>Agency</u>
Tentative Parcel Map	County of San Diego
County Right-of-Way Permits	County of San Diego
Construction Permit	
Encroachment Permit	
Grading Permit	County of San Diego
Groundwater Wells and Exploratory or	County of San Diego
Test Borings Permit	-
Septic Tank Permit	County of San Diego
Water Well Permit	County of San Diego
State Highway Encroachment Permit	CalTrans
General Construction Stormwater Permit	RWQCB
Fire District Approval	Pine Valley Fire Protection District

Title

**ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:** The environmental factors checked below would be potentially affected by this project and involve at least one impact that is a "Potentially Significant Impact" or a "Less Than Significant With Mitigation Incorporated," as indicated by the checklist on the following pages. ☐ Aesthetics ☐ Agriculture and Forest ☐ Air Quality Resources ☑ Cultural Resources ☑ Biological Resources ☐ Geology & Soils ☐ Greenhouse Gas ☐ Hazards & Haz. Materials ☐ Hydrology & Water **Emissions** Quality ☐ Land Use & Planning ☐ Mineral Resources ☑ Noise ☐ Population & Housing ☐ Public Services ☐ Recreation ☐ Utilities & Service ☑ Transportation/Traffic ☑ Mandatory Findings of Significance Systems **DETERMINATION:** (To be completed by the Lead Agency) On the basis of this initial evaluation: On the basis of this Initial Study, the Department of Planning and Land Use finds that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.  $\sqrt{\phantom{a}}$ On the basis of this Initial Study, the Department of Planning and Land Use finds that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared. On the basis of this Initial Study, the Department of Planning and Land Use finds that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required. November 4, 2010 Signature Date

#### INSTRUCTIONS ON EVALUATION OF ENVIRONMENTAL IMPACTS

- 1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, Less Than Significant With Mitigation Incorporated, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4. "Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
  - a) Earlier Analysis Used. Identify and state where they are available for review.
  - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7. The explanation of each issue should identify:
  - a) The significance criteria or threshold, if any, used to evaluate each question; and
  - b) The mitigation measure identified, if any, to reduce the impact to less than significance

<ul><li>I. AESTHETICS Would the project:</li><li>a) Have a substantial adverse effect on a scenic vista?</li></ul>			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discuss	sion/Explanation:		
Less Than Significant Impact: A vista is a view from a particular location or composite views along a roadway or trail. Scenic vistas often refer to views of natural lands, but may also be compositions of natural and developed areas, or even entirely of developed and unnatural areas, such as a scenic vista of a rural town and surrounding agricultural lands. What is scenic to one person may not be scenic to another, so the assessment of what constitutes a scenic vista must consider the perceptions of a variety of viewer groups.			
The items that can be seen within a vista are visual resources. Adverse impacts to individual visual resources or the addition of structures or developed areas may or may not adversely affect the vista. Determining the level of impact to a scenic vista requires analyzing the changes to the vista as a whole and also to individual visual resources.			
Based on a site visit completed by County staff on May 16, 2008, the proposed project is located near or within the viewshed of a scenic vista. The viewshed and visible components of the landscape within that viewshed, including the underlying landform and overlaying land cover, establish the visual environment for the scenic vista. The visual environment of the subject scenic vista extends from Old Highway 80 into the surrounding valley to the east and adjacent sloping lands to the west. The visual composition consists of rural residential lots with single family residences adjacent to Old Highway 80 and State Lands containing native vegetation.			
The proposed project is a minor residential subdivision to create 4 residential lots. The project is compatible with the existing visual environment in terms of visual character and quality because: the project proposes lots which are consistent with the surrounding area in terms of lot size and use. Similar to the surrounding area, the project proposes single family residences adjacent to Old Highway 80 and dedicated open space adjacent to State Lands. Therefore, the proposed project will not have a substantial adverse effect on a scenic vista.			
,	Substantially damage scenic resources, outcroppings, and historic buildings with		<u> </u>
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

**No Impact:** State scenic highways refer to those highways that are officially designated by the California Department of Transportation (Caltrans) as scenic (Caltrans - California Scenic Highway Program). Generally, the area defined within a State scenic highway is the land adjacent to and visible from the vehicular right-of-way. The dimension of a scenic highway is usually identified using a motorist's line of vision, but a reasonable boundary is selected when the view extends to the distant horizon. The scenic highway corridor extends to the visual limits of the landscape abutting the scenic highway.

Based on a site visit by County staff on May 16, 2008, the proposed project is not located near or visible within the composite viewshed of a State scenic highway and will not damage or remove visual resources within a State scenic highway. The project site is maintaining large residential lots, and will remain consistent with the surrounding landscape. Therefore, the proposed project will not have any substantial adverse effect on a scenic resource within a State scenic highway.

c)	Substantially degrade the existing visua surroundings?	l char	acter or quality of the site and its
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

#### Discussion/Explanation:

Less Than Significant Impact: Visual character is the objective composition of the visible landscape within a viewshed. Visual character is based on the organization of the pattern elements line, form, color, and texture. Visual character is commonly discussed in terms of dominance, scale, diversity and continuity. Visual quality is the viewer's perception of the visual environment and varies based on exposure, sensitivity and expectation of the viewers. The existing visual character and quality of the project site and surrounding can be characterized as large estate residential lots and vacant parcels. The surrounding area west of Old Highway 80 is hilly with dense vegetation, while the immediate area east of Old Highway 80 is flat, open land.

The proposed project is minor residential subdivision of a 32 acres parcel into four lots ranging in size from 6.22 to 9.44 acres net. The project is compatible with the existing environment's visual character and quality for the following reasons: it would be consistent with other large parcels in the area; biological and steep slope easements would limit the area of future building; and a noise buffer requires the submittal of a noise analysis if the pads fall with 340 feet from the centerline of Old Highway 80. All of these components and more reduce the visual impact from the adjacent public road.

The project will not result in cumulative impacts on visual character or quality because the entire existing viewshed and a list of past, present and future projects within that viewshed were evaluated. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the viewshed surrounding the project and will not contribute to a cumulative impact for the following reasons: the proposed project is similar to the surrounding viewshed, which is comprised of lots that are either vacant or developed with single family residences. Therefore, the project will not result in any adverse project or cumulative level effect on visual character or quality on-site or in the surrounding area.

,	Create a new source of substantial light day or nighttime views in the area?	or gla	ire, which would adversely affect
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		

**Less Than Significant Impact:** The project proposes a minor residential subdivision, which may include outdoor lighting. Any future outdoor lighting pursuant to this project shall be required to meet the requirements of the County of San Diego Zoning Ordinance (Section 6322-6326) and the Light Pollution Code (Section 59.101-59.115).

The project will not contribute to significant cumulative impacts on day or nighttime views because the project will conform to the Light Pollution Code. The Code was developed by the San Diego County Department of Planning and Land Use and Department of Public Works in cooperation with lighting engineers, astronomers, land use planners from San Diego Gas and Electric, Palomar and Mount Laguna observatories, and local community planning and sponsor groups to effectively address and minimize the impact of new sources light pollution on nighttime views. The standards in the Code are the result of this collaborative effort and establish an acceptable level for new lighting. Compliance with the Code is required prior to issuance of any building permit for any project. Mandatory compliance for all new building permits ensures that this project in combination with all past, present and future projects will not contribute to a cumulatively considerable impact. Therefore, compliance with the Code ensures that the project will not create a significant new source of substantial light or glare, which would adversely affect daytime or nighttime views in the area, on a project or cumulative level.

#### II. AGRICULTURE AND FORESTRY RESOURCES -- Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance (Important Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, or other agricultural resources, to non-agricultural use?

	Potentially Significant Impact		Less than Significant Impact
	Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact
Discus	sion/Explanation:		
No Impact: The project site does not contain any agricultural resources, lands designated as Prime Farmland, Unique Farmland, or Farmland of Statewide or Local importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. Therefore, no agricultural resources including Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance will be converted to a non-agricultural use.			
o) (	Conflict with existing zoning for agricultu	ıral us	e, or a Williamson Act contract?
	Potentially Significant Impact		Less than Significant Impact
	Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact
Discus	sion/Explanation:		
<b>No Impact:</b> The project site is zoned RR.25 (Rural Residential), which is not considered to be an agricultural zone. Additionally, the project site's land is not under a Williamson Act Contract. Therefore, the project does not conflict with existing zoning for agricultural use, or a Williamson Act Contract.			
Pub Res	offlict with existing zoning for, or cause resolic Resources Code section 12220(g)), sources Code section 4526), or timberlained by Government Code section 5110	or timl nd zor	perland (as defined by Public
	Potentially Significant Impact		Less than Significant Impact
	Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact
Discus	sion/Explanation:		

No Impact: The project site including offsite improvements do not contain forest lands or timberland. The County of San Diego does not have any existing Timberland Production Zones. In addition, the project is consistent with existing zoning and a rezone of the property is not proposed. Therefore, project implementation would not conflict with existing zoning for, or cause rezoning of, forest land, timberland or timberland production zones.

a)	involve other changes in the existing environment, which, due to their location of nature, could result in conversion of forest land to non-forest use?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discu	ssion/Explanation:		
<b>No Impact:</b> The project site including any offsite improvements do not contain any forest lands as defined in Public Resources Code section 12220(g), therefore project implementation would not result in the loss or conversion of forest land to a non-forest use. In addition, the project is not located in the vicinity of offsite forest resources.			
e)	Involve other changes in the existing en nature, could result in conversion of Impresources, to non-agricultural use?		· · · · · · · · · · · · · · · · · · ·
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The surrounding area within radius of 0.25 miles has lands designated as Farmland of Local Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. As a result, the proposed project was reviewed by staff agricultural specialist, Marcus Lubich, and was determined not to have significant adverse impacts related to the conversion of Prime Farmland, Unique Farmland, Farmland of Statewide or Local Importance or active agricultural operations to a non-agricultural use for the following reasons: The project site does not contain any agricultural resources, or lands designated as Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. Although there are lands designated as Farmland of Local Importance located within ½ mile of the project site, these lands have no active agriculture onsite and are buffered from the project site by Old Highway 80.

Furthermore, the 2007 Crop Statistics and Annual Report states that in San Diego County, economically productive agriculture is conducted on small farms, with 63 percent of farms ranging from 1 to 9 acres and the median farm size being 5 acres (Crop Statistics and Annual Report, 2007). With 77% of farmers living on farms in San Diego County, it is common for farming to occur on land also occupied by a residential uses. The proposed parcel sizes range from 6.22 acres to 9.44 acres, and parcels of

these sizes ensure that agriculture will remain a viable activity on the project site. Based on the size of the proposed parcels, sufficient unencumbered land is expected to remain available for agricultural use after development and therefore, the project would not substantially impair the ongoing viability of the site for agricultural use.

Therefore, no potentially significant project or cumulative level conversion of Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Farmland of Local Importance to a non-agricultural use will occur as a result of this project.

III. AIR QUALITY -- Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the San Diego Regional Air Quality Strategy (RAQS) or applicable portions of the State Implementation Plan (SIP)?			
	Potentially Significant Impact Less Than Significant With Mitigation		Less than Significant Impact
L	Incorporated	Ш	No Impact
Discu	ssion/Explanation:		
Less Than Significant Impact: The project proposes development that was anticipated in SANDAG growth projections used in development of the RAQS and SIP. Operation of the project will result in emissions of ozone precursors that were considered as a part of the RAQS based on growth projections. As such, the proposed project is not expected to conflict with either the RAQS or the SIP. In addition, the operational emissions from the project are below the screening levels, and subsequently will not violate ambient air quality standards.			
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			
	Potentially Significant Impact	$\checkmark$	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact
Discu	ssion/Explanation:		

**Less Than Significant Impact:** In general, air quality impacts from land use projects are the result of emissions from motor vehicles, and from short-term construction activities associated with such projects. The San Diego County Land Use Environment Group (LUEG) has established guidelines for determining significance which incorporate the Air Pollution Control District's (SDAPCD) established screening-level criteria for all new source review (NSR) in APCD Rule 20.2. These screening-level criteria can be used as numeric methods to demonstrate that a project's total emissions (e.g. stationary and fugitive emissions, as well as emissions from mobile sources) would not result in a significant impact to air quality. Since APCD does not have screening-level criteria for emissions of volatile organic compounds (VOCs), the use of the screening level for reactive organic compounds (ROC) from the South Coast Air Quality Management District (SCAQMD) for the Coachella Valley (which are more appropriate for the San Diego Air Basin) are used.

The project proposes minor residential subdivision. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal, temporary and localized, resulting in pollutant emissions below the screening-level criteria established by the LUEG guidelines for determining significance. In addition, the vehicle trips generated from the project will result in 48 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the screening-level criteria established by the guidelines for criteria pollutants. As such, the project will not violate any air quality standard or contribute substantially to an existing or projected air quality violation.

c)	Result in a cumulatively considerable newhich the project region is non-attainment ambient air quality standard (including requantitative thresholds for ozone precur	nt und eleasi	der an applicable federal or state ng emissions which exceed
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

**Less Than Significant Impact:** San Diego County is presently in non-attainment for the 1-hour concentrations under the California Ambient Air Quality Standard (CAAQS) for Ozone ( $O_3$ ). San Diego County is also presently in non-attainment for the annual geometric mean and for the 24-hour concentrations of Particulate Matter less than or equal to 10 microns ( $PM_{10}$ ) under the CAAQS.  $O_3$  is formed when volatile organic compounds (VOCs) and nitrogen oxides ( $NO_x$ ) react in the presence of sunlight. VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil); solvents; petroleum processing and storage; and pesticides. Sources of  $PM_{10}$  in both urban and rural areas include: motor vehicles, wood burning stoves and fireplaces, dust from construction, landfills, agriculture, wildfires, brush/waste burning, and industrial sources of windblown dust from open lands.

Air quality emissions associated with the project include emissions of PM<sub>10</sub>, NO<sub>x</sub> and VOCs from construction/grading activities, and also as the result of increase of traffic from project implementation. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance,

which requires the implementation of dust control measures. Emissions from the construction phase would be minimal, localized and temporary resulting in  $PM_{10}$  and VOC emissions below the screening-level criteria established by the LUEG guidelines for determining significance. The vehicle trips generated from the project will result in 48 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the screening-level criteria established by the LUEG guidelines for determining significance.

In addition, a list of past, present and future projects within the surrounding area were evaluated and none of these projects emit significant amounts of criteria pollutants. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. The proposed project as well as the past, present and future projects within the surrounding area, have emissions below the screening-level criteria established by the LUEG guidelines for determining significance, therefore, the construction and operational emissions associated with the proposed project are not expected to create a cumulatively considerable impact nor a considerable net increase of PM10, or any  $O_3$  precursors.

d)	Expose sensitive receptors to substantia	al poll	utant concentrations?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

**No Impact:** Air quality regulators typically define sensitive receptors as schools (Preschool-12<sup>th</sup> Grade), hospitals, resident care facilities, or day-care centers, or other facilities that may house individuals with health conditions that would be adversely impacted by changes in air quality. The County of San Diego also considers residences as sensitive receptors since they house children and the elderly

Air quality regulators typically define sensitive receptors as schools (Preschool-12<sup>th</sup> Grade), hospitals, resident care facilities, or day-care centers, or other facilities that may house individuals with health conditions that would be adversely impacted by changes in air quality. The County of San Diego also considers residences as sensitive receptors since they house children and the elderly

Based a site visit conducted by County Staff on May 16, 2008, sensitive receptors and point sources of toxic emissions have not been identified within a quarter-mile (the radius determined by the SCAQMD in which the dilution of pollutants is typically significant) of the proposed project. Furthermore, no point-source emissions of air pollutants (other than vehicle emissions) are associated with the project. As such, the project will not expose sensitive populations to excessive levels of air pollutants

e)	e) Create objectionable odors affecting a substantial number of people?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		
would sulfide endoto if prese signific Moreov area and all with the substitution of the sulfide endoto if prese signification of the sulfide endoto if prese signification of the sulfide endoto if prese significant endoto if endoto in the sufficient	<b>Less Than Significant Impact:</b> The project could produce objectionable odors, which would result from volatile organic compounds, ammonia, carbon dioxide, hydrogen sulfide, methane, alcohols, aldehydes, amines, carbonyls, esters, disulfides dust and endotoxins from the construction and operational phases. However, these substances, if present at all, would only be in trace amounts (less that 1 μg/m³). Subsequently, no significant air quality – odor impacts are expected to affect surrounding receptors. Moreover, the affects of objectionable odors are localized to the immediate surrounding area and will not contribute to a cumulatively considerable odor. <b>IV. BIOLOGICAL RESOURCES</b> Would the project:		
local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			
	Potentially Significant Impact Less Than Significant With Mitigation		Less than Significant Impact
$\overline{\checkmark}$	Incorporated		No Impact
Discus	sion/Explanation:		

Less than Significant with Mitigation Incorporated: Based on an analysis of aerial photographs and a Biological Technical Report (Robin Church, August, 2010), the site supports 12.66 acres of interior live oak woodland, 17.66 acres of granitic southern mixed chaparral, 1.59 acres of big sagebrush scrub and 0.45 acres of disturbed habitat. No sensitive plant species and five sensitive wildlife species were observed on site: Cooper's hawk (Accipiter cooperii), red-shouldered hawk (Buteo Lineatus), western bluebird (Sialia mexicana), mountain lion (Puma concolor) and southern mule deer (Odocoileus hemionus).

The project will preserve 8.11 acres of interior live oak woodland, 13.96 acres of granitic southern mixed chaparral and 0.07 acres of big sagebrush scrub in an on-site biological open space easement. However, due to the small size and non-contiguity to adjacent lands, the south eastern open space easement adjacent to Old Highway 80 will not be counted for habitat mitigation credit. The resources protected within the easement boundaries will provide some amount of habitat for sensitive species in the south eastern open space and is designated as "impact neutral," where the acreage will not be counted as an impact. To protect sensitive species on-site after construction,

permanent fencing and signage will be required at the interface between the preserved habitat and future development. Grading and clearing will be restricted during the breeding season of migratory birds and raptors.

All remaining habitat on-site (4.53 acres of interior live oak woodland, 2.43 acres of granitic southern mixed chaparral, 1.52 acres of big sagebrush scrub and 0.31 acres of disturbed habitat) will be impacted through the construction of a road, driveways, houses, septic fields and fire-clearing. To mitigate for loss of habitat not placed in the on-site biological open space easement, the project proponent will purchase 3.25 acres of interior live oak woodland.

County staff has reviewed the past, present, and probable future projects as listed in Section XVII(b) and has determined that the cumulative loss of interior live oak woodland, granitic southern mixed chaparral and big sagebrush scrub may cause a significant impact on candidate, sensitive, or special status species. The preservation of on-site habitat as well as the purchase of off-site habitat within a larger preserved habitat area will reduce this project's contribution to cumulative biological impacts by contributing to the development of large, biologically viable areas that support candidate, sensitive, or special status species.

Therefore, staff has determined that although the site supports native biological habitat, implementation of the mitigation measures described above will ensure that removal of this habitat will not result in substantial adverse effects, or have a cumulatively considerable impact to species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations the California Department of Fish and Game or US Fish and Wildlife Services.		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant with Mitigation Incorporated: The project site does not contain riparian habitat, however, the site does support interior live oak woodland, granitic southern mixed chaparral and big sagebrush scrub which are recognized as sensitive natural communities by the County, the California Department of Fish and Game, and the US Fish and Wildlife Service. As detailed in response a) above, direct, indirect and cumulative impacts to this resource are considered less than significant through the preservation of on-site habitat as well as the purchase of off-site habitat.

c)	Have a substantial adverse effect on fed Section 404 of the Clean Water Act (inclean pool, coastal, etc.) through direct remove other means?	luding	, but not limited to, marsh, vernal
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discu	ssion/Explanation:		
Technideterri Game ephenicompli confori is no ri 401/40 U.S. A	than Significant with Mitigation Incorphical Report dated August, 2010 and preprinced that Army Corps of Engineers (ACC (CDFG) and State Regional Water Qualmeral drainages are found on the project stance with the Storm Water Management mance with the County of San Diego Biomet loss of wetland function and value. In 04 permit issued by the California Region Army Corps of Engineers and a Streambernia Department of Fish and Game will be wal.	eared by the control of the control	by Robin Church, it has been California Department of Fish and Introl Board (RWQCB) jurisdictional Mitigation measures, including and habitat based mitigation in Il Guidelines will ensure that there ion, a Clean Water Act, Section Iter Quality Control Board and the eration Agreement issued by the
d)	Interfere substantially with the movemer or wildlife species or with established na corridors, or impede the use of native wi	tive re	esident or migratory wildlife
✓	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less than Significant With Mitigation Incorporated: The project site currently functions as a wildlife movement site as it is adjacent to large blocks of habitat. The proposed development of four residential lots has been clustered toward Old Highway 80. The western portion of the site will be placed in a dedicated biological open space easement which will contribute to the use of the site as a wildlife movement site. The project site was not found to have any suitable wildlife nursery sites and will therefore have no impact on functioning wildlife nursery sites. With the on-site habitat preservation, this project's contribution to any cumulative impact to wildlife movement will be rendered less than cumulatively considerable and will contribute to the preservation of large, biologically viable areas that provide wildlife corridors.

e)	C	Conflict with the provisions of any adopte Communities Conservation Plan, other a conservation plan or any other local police esources?	pprov	ed local, regional or state habitat

Pignic	Pignio at there proje , "Cul r, San	lo of Laguna Mountain e are no impacts to historical ct site. The results of the survey tural Resources Testing Of The Diego County, California", dated
b)		Cause a substantial adverse change in t esource pursuant to 15064.5?	he sig	nificance of an archaeological
		Potentially Significant Impact		Less than Significant Impact
5	Z	Less Than Significant With Mitigation		No Impact

Less Than Significant With Mitigation Incorporated: The project site has been surveyed by a County approved archaeologist Andrew R. Pigniolo of Laguna Mountain Environmental, Inc., and it has been determined that there are several prehistoric archaeological resources present. An archaeological technical study titled, "Cultural Resources Testing Of The Sanders Minor Subdivision Project, Pine Valley, San Diego County, California", dated September 2010, prepared by Andrew R. Pigniolo of Laguna Mountain Environmental, Inc.

The report provides the results of a cultural resource testing program to determine the significance of four site(s) located within the project area: CA-SDI-17207, CA-SDI-17210\*, CA-SDI-17211, CA-SDI-19289\* and CA-SDI-19290 (\*CA-SDI-17210 and CA-SDI-19289 were determined to be one site with 2 loci). One site, CA-SDI-17212, was not tested because it will be preserved and protected within a biological open space. Testing of the four sites determined that one site (CA-SDI-17210/19289) is CEQA significant. While the other three sites are important resources, the testing program exhausted the research potential and the impacts to these sites would have a less than significant impact.

Site CA-SDI-17210/19289 has been identified as a bedrock milling site and as such, along with the recovery of 318 artifacts, is considered significant under CEQA criteria (d) and recommended as eligible for listing in the California Register of Historic Places. However, this site does not meet the criteria considered as RPO significant. Mitigation of direct and indirect impacts to the site will be achieved through completion of a data recovery program.

Because there is the potential for the presence of buried resources, monitoring during any grading (after Data Recovery) consisting of a County-approved archaeologist and Native American observer will be required to ensure that, if features such as hearths, or human remains are found, they will be handled in an appropriate manner. In addition, recordation of information obtained during this study and the curation of all artifacts will be required to exhaust all research potential.

In addition, the Native American Heritage Commission (NAHC) was contacted for a listing of Native American Tribes whose ancestral lands may be impacted by the project. The tribes listed by the NAHC were received and letters requesting tribal consultation were sent out May 15, 2010. Tribes contacted did not respond.

c)	[	Directly or indirectly destroy a unique geologic feature?				
		Potentially Significant Impact		Less than Significant Impact		
		Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact		

**No Impact:** San Diego County has a variety of geologic environments and geologic processes which generally occur in other parts of the state, country, and the world. However, some features stand out as being unique in one way or another within the boundaries of the County.

The site does not contain any unique geologic features that have been listed in the County's Guidelines for Determining Significance for Unique Geology Resources nor does the site support any known geologic characteristics that have the potential to support unique geologic features.

d)	Dire	ctly or indirectly destroy a unique pa	leonto	ological resource or site?
	– ¬ Le	otentially Significant Impact ess Than Significant With Mitigation corporated		Less than Significant Impact No Impact
Disc	ussion	/Explanation:		
the p	roject	<ul> <li>A review of the County's Paleontol is located entirely on plutonic igneout fossil remains.</li> </ul>		
e)		urb any human remains, including the teries?	ose in	terred outside of formal
	- 7 Le	otentially Significant Impact ess Than Significant With Mitigation corporated		Less than Significant Impact No Impact

Discussion/Explanation:

**No Impact:** Based on an analysis of records and a survey of the property by a County of San Diego approved archaeologist Andrew R. Pigniolo of Laguna Mountain Environmental, Inc.,, it has been determined that the project will not disturb any human remains because the project site does not include a formal cemetery or any archaeological resources that might contain interred human remains. The results of the survey are provided in an archaeological survey report titled, "*Cultural Resources Testing Of The Sanders Minor Subdivision Project, Pine Valley, San Diego County, California*", dated September 2010, prepared by Andrew R. Pigniolo of Laguna Mountain Environmental, Inc.

In addition, the project must comply with the San Diego County Grading, Clearing, and Watercourse Ordinance (§87.101-87.804), CEQA §15064.5(d), and §7050.5 of the Health & Safety Code. Section 87.429 of the Grading, Clearance, and Watercourse

Ordinance requires the suspension of grading operations when human remains or Native American artifacts are encountered.

Less Than Significant With Mitigat Incorporated	ion 🔲	No Impact
Discussion/Explanation:		
Less Than Significant Impact: To ensure structures, the project must conform to the California Building Code. The County Code proposed foundation recommendations to permit. Therefore, compliance with the Calensures the project will not result in a poter people or structures to potential adverse efforts.	Seismic F e requires be approv lifornia Bu ntially sign	Requirements as outlined within the a soils compaction report with ed before the issuance of a building ilding Code and the County Code ificant impact from the exposure of
iii. Seismic-related ground failur	e, includin	g liquefaction?
☐ Potentially Significant Impact		Less than Significant Impact
Less Than Significant With Mitigat	ion 🗹	No Impact

**No Impact:** The project site is not within a "Potential Liquefaction Area" as identified in the County Guidelines for Determining Significance for Geologic Hazards. This indicates that the geologic environment of the project site is not susceptible to ground failure from seismic activity. In addition, the site is not underlain by poor artificial fill or located within a floodplain. Therefore, there will be no impact from the exposure of people or structures to adverse effects from a known area susceptible to ground failure, including liquefaction.

iv. Land	slides?		
			Less than Significant Impact No Impact
Area" as identified Hazards. Landslid profiles included in 2004). In addition, the an occupancy with regards to
b) Result in su	bstantial soil erosion or the l	oss of	topsoil?
	Significant Impact Significant With Mitigation ed		Less than Significant Impact No Impact

Discussion/Explanation:

**Less Than Significant Impact**: According to the Soil Survey of San Diego County, the soils on-site are identified as Bancas stony loam, which has a soil erodibility rating of

"severe" as indicated by the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. However, the project will not result in substantial soil erosion or the loss of topsoil for the following reasons:

- The project will not result in unprotected erodible soils; will not alter existing drainage patterns; is not located in a floodplain, wetland, or significant drainage feature; and will not develop steep slopes.
- The project has prepared a Major Stormwater Management Plan by Snipes-Dye Associates, dated April 27, 2010. The plan includes the following Best Management Practices to ensure sediment does not erode from the project site: silt fences, vegetated swales, fiber rolls, stockpile management, concrete waste management and gravel bag berms.
- The project involves grading. However, the project is required to comply with the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING). Compliance with these regulations minimizes the potential for water and wind erosion.

Due to these factors, it has been found that the project will not result in substantial soil erosion or the loss of topsoil on a project level.

In addition, the project will not contribute to a cumulatively considerable impact because all the of past, present and future projects included on the list of projects that involve grading or land disturbance are required to follow the requirements of the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING); Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); and County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

c) Will the project produce unstable geological conditions that will result in advine impacts resulting from landslides, lateral spreading, subsidence, liquefactio collapse?					
		Potentially Significant Impact	$\checkmark$	Less than Significant Impact	
		Less Than Significant With Mitigation Incorporated		No Impact	

**Less Than Significant Impact:** The project will result in site disturbance and grading of 13,200 cubic yards of cut and fill soil. The proposed project is consistent with the geological formations underlying the site. For further information refer to VI Geology and Soils, Question a., i-iv listed above.

d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?					
[		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Disc	uss	sion/Explanation:				
have Dieg Fore defir Band not h impr Desi Expa with	Less Than Significant Impact: The project is located on soils which are considered to have a moderate shrink-swell behavior as defined within the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. These soils do not qualify as expansive soils as defined by Table 18-I-B of the Uniform Building Code (1994). The soils on-site are Bancas stony loam, 30 to 65 percent slopes, Acid igneous rock land. The project will not have any significant impacts because the project is required to comply the mprovement requirements identified in the 1997 Uniform Building Code, Division III – Design Standard for Design of Slab-On-Ground Foundations to Resist the Effects of Expansive Soils and Compressible Soils, which ensure suitable structure safety in areas with expansive soils. Therefore, these soils will not create substantial risks to life or property.					
e)	6	Have soils incapable of adequately suppalternative wastewater disposal systems disposal of wastewater?	_	•		
[		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Less Than Significant Impact: The project proposes to discharge domestic waste to on-site wastewater systems (OSWS), also known as septic systems. The project involves four on-site wastewater systems. Discharged wastewater must conform to the Regional Water Quality Control Board's (RWQCB) applicable standards, including the Regional Basin Plan and the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are adequately designed, located, sized, spaced, constructed and maintained." The RWQCBs with jurisdiction over San Diego County have authorized the County of San Diego, Department of Environmental Health (DEH) to

issue certain OSWS permits throughout the County and within the incorporated cities. DEH has reviewed the OSWS lay-out for the project pursuant to DEH, Land and Water Quality Division's, "On-site Wastewater Systems: Permitting Process and Design Criteria." DEH approved the project's OSWS on July 6, 2009. Therefore, the project has soils capable of adequately supporting the use of septic tanks or alternative wastewater disposal systems as determined by the authorized, local public agency. In addition, the project will comply with the San Diego County Code of Regulatory Ordinances, Title 6, Div. 8, Chap. 3, Septic Tanks and Seepage Pits.

#### VII. GREENHOUSE GAS EMISSIONS – Would the project

a)	Generate greenhouse gas emissions, e significant impact on the environment?	ither o	directly or indirectly, that may have a
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: Greenhouse Gas (GHG) Emissions are said to result in an increase in the earth's average surface temperature commonly referred to as global warming. This rise in global temperature is associated with long-term changes in precipitation, temperature, wind patterns, and other elements of the earth's climate system, known as climate change. These changes are now broadly attributed to GHG emissions, particularly those emissions that result from the human production and use of fossil fuels.

GHGs include carbon dioxide, methane, halocarbons (HFCs), and nitrous oxide, among others. Human induced GHG emissions are a result of energy production and consumption, and personal vehicle use, among other sources. A regional GHG inventory prepared for the San Diego Region<sup>1</sup> identified on-road transportation (cars and trucks) as the largest contributor of GHG emissions in the region, accounting for 46% of the total regional emissions. Electricity and natural gas combustion were the second (25%) and third (9%) largest regional contributors, respectively, to regional GHG emissions.

Climate changes resulting from GHG emissions could produce an array of adverse environmental impacts including water supply shortages, severe drought, increased flooding, sea level rise, air pollution from increased formation of ground level ozone and particulate matter, ecosystem changes, increased wildfire risk, agricultural impacts, ocean and terrestrial species impacts, among other adverse effects.

<sup>&</sup>lt;sup>1</sup> San Diego County Greenhouse Gas Inventory: An Analysis of Regional Emissions and Strategies to Achieve AB 32 Targets. University of San Diego and the Energy Policy Initiatives Center (EPIC), September 2008.

In 2006, the State passed the Global Warming Solutions Act of 2006, commonly referred to as AB 32, which set the greenhouse gas emissions reduction goal for the State of California into law. The law requires that by 2020, State emissions must be reduced to 1990 levels by reducing greenhouse gas emissions from significant sources via regulation, market mechanisms, and other actions.

According to the San Diego County Greenhouse Gas Inventory (2008), the region must reduce its GHG emissions by 33 percent from "business-as-usual" emissions to achieve 1990 emissions levels by the year 2020. "Business-as-usual" refers to the 2020 emissions that would have occurred in the absence of the mandated reductions.

Senate Bill 375 (SB 375), passed in 2008, links transportation and land use planning with global warming. It requires the California Air Resources Board (ARB) to set regional targets for the purpose of reducing greenhouse gas emissions from passenger vehicles. Under this law, if regions develop integrated land use, housing and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA. Development of regional targets is underway and SANDAG is in the process of preparing the region's Sustainable Communities Strategy (SCS) which will be a new element of the 2050 Regional Transportation Plan (RTP). The strategy will identify how regional greenhouse gas reduction targets, as established by the ARB, will be achieved through development patterns, transportation infrastructure investments, and/or transportation measures or policies that are determined to be feasible.

In addressing the potential for a project to generate GHG emissions that would have a potentially significant cumulative effect on the environment, a 900 metric ton threshold was selected to identify those projects that would be required to calculate emissions and implement mitigation measures to reduce a potentially significant impact. The 900 metric ton screening threshold is based on a threshold included in the CAPCOA white paper<sup>2</sup> that covers methods for addressing greenhouse gas emissions under CEQA. The CAPCOA white paper references the 900 metric ton guideline as a conservative threshold for requiring further analysis and mitigation. The 900 metric ton threshold was based on a review of data from four diverse cities (Los Angeles in southern California and Pleasanton, Dublin, and Livermore in northern California) to identify the threshold that would capture at least 90% of the residential units or office space on the pending applications list. This threshold will require a substantial portion of future development to minimize GHG emissions to ensure implementation of AB 32 targets is not impeded. By ensuring that projects that generate more than 900 metric tons of GHG implement mitigation measures to reduce emissions, it is expected that a majority of future development will contribute to emission reduction goals that will assist the region in meeting its GHG reduction targets.

It should be noted that an individual project's GHG emissions will generally not result in direct impacts under CEQA, as the climate change issue is global in nature, however an

2

<sup>&</sup>lt;sup>2</sup> See CAPCOA White Paper: "CEQA &Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act" January 2008 (http://www.capcoa.org/rokdownloads/CEQA/CAPCOA%20White%20Paper.pdf).

individual project could be found to contribute to a potentially significant cumulative impact. CEQA Guidelines Section 15130(f) states that an EIR shall analyze greenhouse gas emissions resulting from a proposed project when the incremental contribution of those emissions may be cumulatively considerable.

The project is a minor subdivision of 32 acres into four residential lots and is expected to generate less than 900 metric tons of GHG emissions based on estimates of GHG emissions for various project types included in the CAPCOA white paper<sup>3</sup>. Emissions from the project will be generated from vehicular traffic and residential uses. The project's GHG emissions are found to have a less than cumulatively considerable contribution to GHG emissions because the project will generate less than 900 metric tons of GHGs.

Furthermore, projects that generate less than 900 metric tons of GHG, will also participate in emission reductions because air emissions including GHGs are under the purview of CARB (or other regulatory agencies) and will be "regulated" either by CARB, the Federal Government, or other entities. For example, new vehicles will be subject to increased fuel economy standards and emission reductions<sup>4</sup>, large and small appliances will be subject to more strict emissions standards, and energy delivered to consumers will increasingly come from renewable sources<sup>5</sup>. As a result, even the emissions that result from projects that produce less than 900 metric tons of GHG will be subject to emission reductions. Likewise, the project would also participate in the mandated emissions reductions through energy and resource use that is subject to emission reduction mandates beyond "business-as-usual."

Therefore, it is determined that the project would result in less than cumulatively considerable impacts associated with GHG emissions and no mitigation is required.

<sup>3</sup> 900 metric tons of GHG emissions are estimated to be generated by 50 Single Family Residential units, 70 apartments/condos, 35,000 sf of general commercial/office, 11,000 sf of retail, or 6,300 sf of supermarket/grocery space.

<sup>&</sup>lt;sup>4</sup> On September 15, 2009, the United States Environmental Protection Agency (EPA) and the Department of Transportation's National Highway Safety Administration (NHTSA) proposed a national program to reduce GHG emissions and improve fuel economy for new cars and trucks sold in the United States. The proposed standards would cut CO<sub>2</sub> emissions by an estimated 950 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program.

<sup>&</sup>lt;sup>5</sup> California's Renewable Portfolio Standard (RPS) requires electric corporations to increase procurement from eligible renewable energy resources by at least 1% of their retail sales annually, until they reach 20% by 2010. In 2008, the governor signed Executive Order S-14-08 (EO) to streamline California's renewable energy project approval process and increase the state's Renewable Energy Standard to 33% renewable power by 2020. The Air Resources Board is in the process of developing regulations to implement the 33% standard known as the California Renewable Electricity Standard (RES).

,	Conflict with an applicable plan, policy or regulation adopted for the purpose reducing the emissions of greenhouse gases?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

#### **Less Than Significant Impact:**

In 2006, the State passed the Global Warming Solutions Act of 2006, commonly referred to as AB 32, which set the greenhouse gas emissions reduction goal for the State of California into law. The law requires that by 2020, State emissions must be reduced to 1990 levels by reducing greenhouse gas emissions from significant sources via regulation, market mechanisms, and other actions.

Senate Bill 375 (SB 375), passed in 2008, links transportation and land use planning with global warming. It requires the California Air Resources Board (ARB) to set regional targets for the purpose of reducing greenhouse gas emissions from passenger vehicles. Under this law, if regions develop integrated land use, housing and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA. Development of regional targets is underway and SANDAG is in the process of preparing the region's Sustainable Communities Strategy (SCS) which will be a new element of the 2050 Regional Transportation Plan (RTP). The strategy will identify how regional greenhouse gas reduction targets, as established by the ARB, will be achieved through development patterns, transportation infrastructure investments, and/or transportation measures or policies that are determined to be feasible.

To implement State mandates to address climate change in local land use planning, local land use jurisdictions are generally preparing GHG emission inventories and reduction plans and incorporating climate change policies into local General Plans to ensure development is guided by a land use plan that reduces GHG emissions. The County of San Diego is currently in the process of updating its General Plan and incorporating associated climate change policies. These policies will provide direction for individual development projects to reduce GHG emissions and help the County meet its GHG emission reduction targets.

Until local plans are developed to address greenhouse gas emissions, such as a local Sustainable Communities Strategy and updated General Plan Policies, the project is evaluated to determine whether it would impede the implementation of AB 32 GHG reduction targets. For the reasons discussed in the response to question VII.a), the project would not impede the implementation of AB 32 reduction targets. Therefore, the project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

### VIII. HAZARDS AND HAZARDOUS MATERIALS -- Would the project:

a)	Create a significant hazard to the public transport, storage, use, or disposal of hazardous foreseeable upset and accid hazardous materials into the environment	nzardo ent co	ous materials or wastes or through			
	Potentially Significant Impact		Less than Significant Impact			
	Less Than Significant With Mitigation Incorporated	$\overline{\checkmark}$	No Impact			
Discu	ssion/Explanation:					
enviro dispo curre demo to the	<b>No Impact</b> : The project will not create a significant hazard to the public or the environment because it does not propose the storage, use, transport, emission, or disposal of Hazardous Substances, nor are Hazardous Substances proposed or currently in use in the immediate vicinity. In addition, the project does not propose to demolish any existing structures onsite and therefore would not create a hazard related to the release of asbestos, lead based paint or other hazardous materials from demolition activities.					
b)	Emit hazardous emissions or handle haz substances, or waste within one-quarter		· · · · · · · · · · · · · · · · · · ·			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

	Potentially Significant Impact		Less than Significant Impact			
	Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact			

**No Impact:** Based on a site visit and regulatory database search, the project site has not been subject to a release of hazardous substances. The project site is not included in any of the following lists or databases: the State of California Hazardous Waste and Substances sites list compiled pursuant to Government Code Section 65962.5., the San Diego County Hazardous Materials Establishment database, the San Diego County DEH Site Assessment and Mitigation (SAM) Case Listing, the Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program Database ("CalSites" Envirostor Database), the Resource Conservation and Recovery Information System (RCRIS) listing, the EPA's Superfund CERCLIS database or the EPA's National Priorities List (NPL). Additionally, the project does not propose structures for human occupancy or significant linear excavation within 1,000 feet of an open, abandoned, or closed landfill, is not located on or within 250 feet of the boundary of a parcel identified as containing burn ash (from the historic burning of trash), is not on or within 1,000 feet of a Formerly Used Defense Site (FUDS), does not contain a leaking Underground Storage Tank, and is not located on a site with the potential for contamination from historic uses such as intensive agriculture, industrial uses, a gas station or vehicle repair shop. Therefore, the project would not create a significant hazard to the public or environment.

d)	t t	For a project located within an airport lai not been adopted, within two miles of a the project result in a safety hazard for p area?	airport or public use airport, would		
		Potentially Significant Impact		Less than Significant Impact	
		Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact	
Dis	cus	sion/Explanation:			
Co Adı cor saf pro	<b>No Impact:</b> The proposed project is not located within an Airport Land Use Compatibility Plan (ALUCP), an Airport Influence Area, or a Federal Aviation Administration Height Notification Surface. Also, the project does not propose construction of any structure equal to or greater than 150 feet in height, constituting a safety hazard to aircraft and/or operations from an airport or heliport. Therefore, the project will not constitute a safety hazard for people residing or working in the project area.				
e)		For a project within the vicinity of a priva safety hazard for people residing or worl		• • •	
		Potentially Significant Impact		Less than Significant Impact	
		Less Than Significant With Mitigation Incorporated	$\checkmark$	No Impact	

**No Impact:** The proposed project is not within one mile of a private airstrip. As a result, the project will not constitute a safety hazard for people residing or working in the project area.

f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
	ollowing sections summarize the project's nse plans or emergency evacuation plans		istency with applicable emergency

i. OPERATIONAL AREA EMERGENCY PLAN AND MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN:

Discussion/Explanation:

Less Than Significant Impact: The Operational Area Emergency Plan is a comprehensive emergency plan that defines responsibilities, establishes an emergency organization, defines lines of communications, and is designed to be part of the statewide Standardized Emergency Management System. The Operational Area Emergency Plan provides guidance for emergency planning and requires subsequent plans to be established by each jurisdiction that has responsibilities in a disaster situation. The Multi-Jurisdictional Hazard Mitigation Plan includes an overview of the risk assessment process, identifies hazards present in the jurisdiction, hazard profiles, and vulnerability assessments. The plan also identifies goals, objectives and actions for each jurisdiction in the County of San Diego, including all cities and the County unincorporated areas. The project will not interfere with this plan because it will not prohibit subsequent plans from being established or prevent the goals and objectives of existing plans from being carried out.

ii. SAN DIEGO COUNTY NUCLEAR POWER STATION EMERGENCY RESPONSE PLAN

Discussion/Explanation:

**No Impact:** The San Diego County Nuclear Power Station Emergency Response Plan will not be interfered with by the project due to the location of the project, plant and the specific requirements of the plan. The emergency plan for the San Onofre Nuclear Generating Station includes an emergency planning zone within a 10-mile radius. All land area within 10 miles of the plant is not within the jurisdiction of the unincorporated County and as such a project in the unincorporated area is not expected to interfere with any response or evacuation.

#### iii. OIL SPILL CONTINGENCY ELEMENT

Discussion/Explanation:

**No Impact:** The Oil Spill Contingency Element will not be interfered with because the project is not located along the coastal zone or coastline.

iv. EMERGENCY WATER CONTINGENCIES ANNEX AND ENERGY SHORTAGE RESPONSE PLAN

Discussion/Explanation:

**No Impact:** The Emergency Water Contingencies Annex and Energy Shortage Response Plan will not be interfered with because the project does not propose altering major water or energy supply infrastructure, such as the California Aqueduct.

v. DAM EVACUATION PLAN

Discussion/Explanation:

**No Impact:** The Dam Evacuation Plan will not be interfered with because the project is not located within a dam inundation zone.

W	expose people or structures to a significe vildland fires, including where wildlands where residences are intermixed with wi	are a	djacent to urbanized areas or
· <del></del>	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The proposed project is adjacent to wildlands that have the potential to support wildland fires. However, the project will not expose people or structures to a significant risk of loss, injury or death involving wildland fires because the project will comply with the regulations relating to emergency access, water supply, and defensible space specified in the Consolidated Fire Code for the 17 Fire Protection Districts in San Diego County and Appendix II-A, as adopted and amended by the local fire protection district. Implementation of these fire safety standards will occur during the Tentative Map, Tentative Parcel Map, or building permit process. Also, a Fire Service Availability Letter and conditions, dated November 8, 2008, have been received from the Pine Valley Fire Protection District. The conditions from the Pine Valley Fire Protection District include: a 30-foot setback from property lines for all structures, a fuel modification zone of 100-feet around all structures and proposed structures, and open space easements within 100 feet of structures must be maintained free of dead and dying vegetation. The Fire Service Availability Letter indicates the expected emergency

travel time to the project site to be 2 minutes. The Maximum Travel Time allowed pursuant to the County Public Facilities Element is 10 minutes. Therefore, based on the review of the project by County staff, through compliance with the Consolidated Fire Code and Appendix II-A and through compliance with the Pine Valley Fire Protection District's conditions, the project is not anticipated to expose people or structures to a significant risk of loss, injury or death involving hazardous wildland fires. Moreover, the project will not contribute to a cumulatively considerable impact, because all past, present and future projects in the surrounding area are required to comply with the Consolidated Fire Code and Appendix II-A.

h)	Propose a use, or place residents adjacent to an existing or reasonably foreseeable use that would substantially increase current or future resident's exposure to vectors, including mosquitoes, rats or flies, which are capable of transmitting significant public health diseases or nuisances?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:		
<b>No Impact:</b> The project does not involve or support uses that allow water to stand for a period of 72 hours (3 days) or more (e.g. artificial lakes, agricultural irrigation ponds). Also, the project does not involve or support uses that will produce or collect animal waste, such as equestrian facilities, agricultural operations (chicken coops, dairies etc.), solid waste facility or other similar uses. Moreover, based on a site visit conducted by County Staff on May 16, 2008, there are none of these uses on adjacent properties. Therefore, the project will not substantially increase current or future resident's exposure to vectors, including mosquitoes, rats or flies.			
<u>IX. HY</u> a)	YDROLOGY AND WATER QUALITY Violate any waste discharge requirement		I the project:
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project proposes a minor residential subdivision which requires grading and construction of single family homes. DPW staff has reviewed the Preliminary Drainage Study, Stormwater Management Plan (SWMP) and Preliminary Grading Plan prepared by Snipes-Dye Associates. The SWMP is considered adequate for CEQA purposes and complies with the San Diego County Standard Urban Stormwater Mitigation Plan (SUSMP) and the Watershed Protection Ordinance (WPO) requirements for a SWMP. The project site proposes and will be

required to implement the following site design measures and/or source control BMPs and/or treatment control BMPs to reduce potential pollutants to the maximum extent practicable from entering storm water runoff: silt fences, vegetated swales, fiber rolls, stockpile management, concrete waste management and gravel bag berms. These measures will enable the project to meet waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. 2001-01), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP).

Finally, the project's conformance to the waste discharge requirements listed above ensures the project will not create cumulatively considerable water quality impacts related to waste discharge because, through the permit, the project will conform to Countywide watershed standards in the JURMP and SUSMP, derived from State regulation to address human health and water quality concerns. Therefore, the project will not contribute to a cumulatively considerable impact to water quality from waste discharges.

b)	Is the project tributary to an already impaired water body, as listed on the Clea Water Act Section 303(d) list? If so, could the project result in an increase in pollutant for which the water body is already impaired?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

Less Than Significant Impact: The project lies in the Pine hydrologic subarea, within the Tijuana River hydrologic unit. According to the Clean Water Act Section 303(d) list, June 2007, portions of this watershed are impaired. The Tijuana River is impaired for eutrophication, coliform bacteria, organic enrichment/low dissolved oxygen, pesticides, solids, synthetic organics, trace elements, and trash; Tijuana River Estuary is impaired for eutrophication, coliform bacteria, lead, nickel, pesticides, thallium, trash; and the Pacific Ocean at the Tijuana River mouth is impaired for coliform bacteria. Constituents of concern in the Tijuana River watershed include: Freshwater: coliform bacteria, nutrients, trace metals, pesticides, miscellaneous toxics, low dissolved oxygen, and trash; Groundwater: total dissolved solids, nitrates, petroleum, MTBE, and solvents.

The project proposes the following activities that are associated with these pollutants: grading and construction of single family houses. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in any runoff to the maximum extent practicable so as not to increase the level of these pollutants in receiving waters: silt fences, vegetated swales, fiber rolls, stockpile management, concrete waste management and gravel bag berms. The proposed BMPs are consistent with regional surface water and storm water planning and permitting process that has been

established to improve the overall water quality in County watersheds. As a result the project will not contribute to a cumulative impact to an already impaired water body, as listed on the Clean Water Act Section 303(d). Regional surface water and storm water permitting regulation for County of San Diego, Incorporated Cities of San Diego County, and San Diego Unified Port District includes the following: Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). The stated purposes of these ordinances are to protect the health, safety and general welfare of the County of San Diego residents; to protect water resources and to improve water quality; to cause the use of management practices by the County and its citizens that will reduce the adverse effects of polluted runoff discharges on waters of the state; to secure benefits from the use of storm water as a resource; and to ensure the County is compliant with applicable state and federal laws. Ordinance No. 9424 (WPO) has discharge prohibitions, and requirements that vary depending on type of land use activity and location in the County. Ordinance No. 9426 is Appendix A of Ordinance No. 9424 (WPO) and sets out in more detail, by project category, what Dischargers must do to comply with the Ordinance and to receive permits for projects and activities that are subject to the Ordinance. Collectively, these regulations establish standards for projects to follow which intend to improve water quality from headwaters to the deltas of each watershed in the County. Each project subject to WPO is required to prepare a Storm water Management Plan that details a project's pollutant discharge contribution to a given watershed and propose BMPs or design measures to mitigate any impacts that may occur in the watershed.

c)	Could the proposed project cause or co surface or groundwater receiving water beneficial uses?	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The Regional Water Quality Control Board has designated water quality objectives for waters of the San Diego Region as outlined in Chapter 3 of the Water Quality Control Plan (Plan). The water quality objectives are necessary to protect the existing and potential beneficial uses of each hydrologic unit as described in Chapter 2 of the Plan.

The project lies in the Pine hydrologic subarea, within the Tijuana River hydrologic unit that has the following existing and potential beneficial uses for inland surface waters, coastal waters, reservoirs and lakes, and ground water: municipal and domestic supply; agricultural supply; industrial process supply, industrial service supply; freshwater replenishment; contact water recreation; non-contact water recreation; warm freshwater

habitat; cold freshwater habitat; wildlife habitat; commercial and sport fishing; preservation of biological habitats of special significance; estuarine habitat; marine habitat; migration of aquatic organisms; shellfish harvesting; and, rare, threatened, or endangered species habitat.

The project proposes the following potential sources of polluted runoff: grading and construction of single family houses. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed to reduce potential pollutants in runoff to the maximum extent practicable, such that the proposed project will not cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses: silt fences, vegetated swales, fiber rolls, stockpile management, concrete waste management and gravel bag berms.

In addition, the proposed BMPs are consistent with regional surface water, storm water and groundwater planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result, the project will not contribute to a cumulatively considerable exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses. Refer to Section VIII., Hydrology and Water Quality, Question b, for more information on regional surface water and storm water planning and permitting process.

(	Substantially deplete groundwater supp groundwater recharge such that there was lowering of the local groundwater table existing nearby wells would drop to a leguses or planned uses for which permits	ould be leve	be a net deficit in aquifer volume or I (e.g., the production rate of pre- lich would not support existing land
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project will obtain water from on-site groundwater wells and is groundwater dependent with no access to imported water. The subdivision will total 4 residential lots with a groundwater consumption of approximately 2 acre-feet per year. A site-specific Residential Well Test Report prepared by Peterson Environmental Services, Inc. dated March 16, 2009, on file with the Department of Planning and Land Use as Environmental Review Number 03-15-006, indicates that adequate groundwater resources are available to serve the project without interfering substantially with the production rate of nearby wells. As required by the County Groundwater Ordinance, acreage of each proposed lot is in compliance with the minimum parcel size requirement of 4 gross acres. In addition, a 34-year cumulative water balance of the project's tributary watershed was conducted by DPLU dated June 18, 2009. The water balance results indicate that groundwater resources are adequate when taking past projects, current projects, and probable future projects into account.

Therefore, the project and project's basin when developed with probable future projects will have sufficient water supplies available.

e)	Substantially alter the existing drainage through the alteration of the course of a result in substantial erosion or siltation of the course of a result in substantial erosion or siltation of the course of the co	strear	m or river, in a manner which would
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:		
Less Than Significant Impact: DPW staff has reviewed the Preliminary Drainage Study, Stormwater Management Plan (SWMP), and Preliminary Grading Plan prepared by Snipes-Dye Associates. The SWMP is considered adequate for CEQA purposes and complies with the San Diego County Standard Urban Stormwater Mitigation Plan (SUSMP) and Watershed Protection Ordinance (WPO) requirements for a SWMP.  f) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase			
	the rate or amount of surface runoff in a on- or off-site?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Diccur	ssion/Evplanation:		

Discussion/Explanation:

**Less than Significant Impact:** DPW staff has reviewed the Preliminary Drainage Study, Stormwater Management Plan (SWMP), and Preliminary Grading Plan prepared by Snipes-Dye Associates. The proposed project will not significantly alter established drainage patterns & not significantly increase the amount of runoff for the following reasons:

- a. Drainage will be conveyed to either natural drainage channels or approved drainage facilities.
- b. The project will not increase water surface elevation in any watercourse with a watershed equal to or greater one square mile by 1' or more in height.
- c. The project will not increase surface runoff exiting the project site from any watershed to any significant volume.

Therefore, the project will not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding onor off-site. Moreover, the project will not contribute to a cumulatively considerable alteration or a drainage pattern or increase in the rate or amount of runoff, because the project will substantially increase water surface elevation or runoff exiting the site, as detailed above.

•	Create or contribute runoff water which values of contribute runoff water water drainage systems?		exceed the capacity of existing or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		
<b>Less than Significant</b> : DPW staff has reviewed the Preliminary Drainage Study, Stormwater Management Plan (SWMP), and Preliminary Grading Plan prepared by Snipes-Dye Associates. The project does not propose to create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems.			
h)	Provide substantial additional sources of	f pollu	ted runoff?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		
<b>Less Than Significant Impact:</b> The project proposes the following potential sources of polluted runoff: grading and construction of single family homes. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in runoff to the maximum extent practicable: silt fences, vegetated swales, fiber rolls, stockpile management, concrete waste management and gravel bag berms. iii.	MUDFLOW				
Less Than Significant Impact: Mudflow is type of landslide. The site has slopes steeper than 25%. A Geotechnical Report prepared by Geotechnics, Inc. dated February 13, 2009, on file with the Department of Planning and Land Use as Environmental Review Number 03-15-006, has determined that the area above the house pads have relatively thin soils which make the potential for mudflow low. Therefore, it is not anticipated that the project will expose people or property to inundation due to a mudflow.					
	ND USE AND PLANNING Would the perfect that the perfect of the p	•	t:		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Discussion/Explanation:

**No Impact:** The project does not propose the introduction of new infrastructure such major roadways or water supply systems, or utilities to the area. Therefore, the proposed project will not significantly disrupt or divide the established community.

b)	Conflict with any applicable land use pla jurisdiction over the project (including, b plan, local coastal program, or zoning or avoiding or mitigating an environmental	ut not rdinan	limited to the general plan, specific ice) adopted for the purpose of	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	ssion/Explanation:			
Less Than Significant Impact: The proposed project is subject to the Regional Land Use Element Policy 1.5, Country Towns and General Plan Land Use Designation (1) Residential. The General Plan requires minimum gross parcel sizes of 1, 2, or 4 acres, depending on slope, and not more than 1 dwelling units per four acres. The proposed project has gross parcel sizes and density that are consistent with the General Plan. The project is subject to the policies of the Pine Valley Community Plan. The proposed project is consistent with the policies of the Pine Valley Community Plan. The current zone is RR.25, which requires a net minimum lot size of 4 acres. The proposed project is consistent with the Zoning Ordinance requirements for minimum lot size.				
XI. M a)	INERAL RESOURCES Would the proj Result in the loss of availability of a know value to the region and the residents of	wn mii		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	ssion/Explanation:			

**Less Than Significant Impact:** The lands within the project site have not been classified by the California Department of Conservation - Division of Mines and Geology (Update of Mineral Land Classification: Aggregate Materials in the Western San Diego Production-Consumption Region, 1997); but the site is underlain by alluvial deposits.

However, the project site is surrounded by developed land uses including residential lots, and the site abuts Cleveland National Forest, which are incompatible to future extraction of mineral resources on the project site. A future mining operation at the project site would likely create a significant impact to neighboring properties for issues such as noise, air quality, traffic, and possibly other impacts. Therefore, implementation of the project will not result in the loss of availability of a known mineral resource that would be of value since the mineral resource has already been lost due to incompatible land uses.

,	Result in the loss of availability of a loca site delineated on a local general plan, s		•		
	Potentially Significant Impact		Less than Significant Impact		
	Less Than Significant With Mitigation Incorporated	$\overline{\checkmark}$	No Impact		
Discus	sion/Explanation:				
No Impact: The project site is zoned RR.25, which is not considered to be an Extractive Use Zone (S82) nor does it have an Impact Sensitive Land Use Designation (24) with an Extractive Land Use Overlay (25) (County Land Use Element, 2000). Therefore, no potentially significant loss of availability of a known mineral resource of locally important mineral resource recovery (extraction) site delineated on a local general plan, specific plan or other land use plan will occur as a result of this project. Therefore, no potentially significant loss of availability of a known mineral resource of locally important mineral resource recovery (extraction) site delineated on a local general plan, specific plan or other land use plan will occur as a result of this project.  XII. NOISE Would the project result in:  a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards					
П	of other agencies?  Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact		
	Less Than Significant With Mitigation Incorporated		No Impact		
Discus	sion/Explanation:				

Less Than Significant Impact: The project is a 4 parcel subdivision and will be occupied by residential uses. Based on a site visit completed by County staff on May 16, 2008, the surrounding area supports rural residential development. Implementation of a noise protection easement dedication to the map will ensure the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable standards for the following reasons:

## General Plan – Noise Element

The County of San Diego General Plan, Noise Element, Policy 4b addresses noise sensitive areas and requires an acoustical study to be prepared for any use that may expose noise sensitive areas to noise in excess of a Community Noise Equivalent Level (CNEL) of 60 decibels (dBA). Moreover, if the project is excess of CNEL 60 dB(A), modifications must be made to the project to reduce noise levels. Noise sensitive areas include residences, hospitals, schools, libraries, or similar facilities where quiet is an

important attribute. Staff has reviewed tentative parcel map TPM20765 and associated preliminary grading plans received on June 2, 2009. Current in-house GIS applications indicate that portions of Parcels 1, 2, 3 and 4 maybe exposed to noise levels exceeding the County Noise Standard requirement of 60 dBA CNEL. Staff has further analyzed the noise impacts independently. Project is located adjacent to Old Highway 80 which is considered a C.E. Collector Road with a minimum design speed of 55 mph. According to the SanDAG website, anticipated future 2030 traffic counts for Old Highway 80 is 5,000 ADT. Based on preliminary in-house noise modeling (Sound32 Application), future traffic noise levels are projected to be 60 dBA CNEL at portions of Pad 3. Due to this preliminary noise review, a noise study will not be required however; to ensure that proposed future noise sensitive land uses (NSLU) do not exceed the exterior [60 dBA CNEL] and interior [45 dBA CNEL] noise level limit requirement, the project will be dedicated a Noise Protection Easement which extends approximately 340 feet from the centerline of Old Highway 80. Portions of pads within Parcel 3 and Parcel 4 would be exposed to the 60 dBA CNEL future traffic noise contour. The future residential structures on Pads 3 and 4 will provide adequate screening for exterior noise sensitive areas to further reduce noise levels to below 60 dBA CNEL. The project subdivision also complies with the minimum 10% requirement of exterior areas to be below 60 dBA CNEL. The Noise Protection Easement dedication will ensure that interior noise levels comply with the County interior requirement of 45 dBA. The inhouse noise model utilized projected 2030 counts of 5,000 ADT for Old Highway with speeds of 55 mph and a most conservative truck mixed of 92.5/3/4.5 was used. Implementation of a noise protection easement dedication to the map will ensure the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan.

## Noise Ordinance - Section 36-404

Non-transportation noise generated by the project is not expected to exceed the standards of the County of San Diego Noise Ordinance (Section 36-404) at or beyond the project's property line. The site is zoned RR.25 that has a one-hour average daytime sound limit of 50 dBA. The adjacent properties to the west are zoned S80 and have one-hour average daytime sound limit of 50 dBA. Based on review by County Noise Specialist Emmet Aquino on July 10, 2009, the project's noise levels are not anticipated to impact adjoining properties or exceed County Noise Standards because the project does not involve any noise producing equipment that would exceed applicable noise levels at the adjoining property line at this time.

### Noise Ordinance – Section 36-409

The project will not generate construction noise that may exceed the standards of the County of San Diego Noise Ordinance (Section 36-409). Construction operations will occur only during permitted hours of operation pursuant to Section 36-409. Also, it is not anticipated that the project will operate construction equipment in excess of an average sound level of 75dB between the hours of 7 AM and 7 PM.

Finally, the project's conformance to the County of San Diego General Plan (Noise Element, Policy 4b) and County of San Diego Noise Ordinance (Section 36-404 and 36.409) ensures the project will not create cumulatively considerable noise impacts,

because the project will not exceed the local noise standards for noise sensitive areas; and the project will not exceed the applicable noise level limits at the property line or construction noise limits, derived from State regulation to address human health and quality of life concerns. Therefore, the project will not contribute to a cumulatively considerable exposure of persons or generation of noise levels in excess of standards established in the local general plan, noise ordinance, and applicable standards of other agencies.

Finally, the project's conformance to the County of San Diego General Plan (Noise Element, Policy 4b) and County of San Diego Noise Ordinance (Section 36-404 and 36.409) ensures the project will not create cumulatively considerable noise impacts, because the project will not exceed the local noise standards for noise sensitive areas; and the project will not exceed the applicable noise level limits at the property line or construction noise limits, derived from State regulation to address human health and quality of life concerns. Therefore, the project will not contribute to a cumulatively considerable exposure of persons or generation of noise levels in excess of standards established in the local general plan, noise ordinance, and applicable standards of other agencies.

b)	Exposure of persons to or generation of groundborne noise levels?	exce	ssive groundborne vibration or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project proposes residences where low ambient vibration is essential for interior operation and/or sleeping conditions. However, the facilities are typically setback more than 50 feet from any County Circulation Element (CE) roadway using rubber-tired vehicles with projected groundborne noise or vibration contours of 38 VdB or less; any property line for parcels zoned industrial or extractive use; or any permitted extractive uses. A setback of 50 feet from the roadway centerline for heavy-duty truck activities would insure that these proposed uses or operations do not have any chance of being impacted significantly by groundborne vibration or groundborne noise levels (Harris, Miller Miller and Hanson Inc., *Transit Noise and Vibration Impact Assessment* 1995, Rudy Hendriks, *Transportation Related Earthborne Vibrations* 2002). This setback insures that this project site will not be affected by any future projects that may support sources of groundborne vibration or groundborne noise related to the adjacent roadways.

Also, the project does not propose any major, new or expanded infrastructure such as mass transit, highways or major roadways or intensive extractive industry that could generate excessive groundborne vibration or groundborne noise levels and impact vibration sensitive uses in the surrounding area.

Therefore, the project will not expose persons to or generate excessive groundborne vibration or groundborne noise levels on a project or cumulative level.

c)	A substantial permanent increase in am above levels existing without the project		noise levels in the project vicinity

d)	A substantial temporary or periodic increvicinity above levels existing without the		
	Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact

Discussion/Explanation:

**Less Than Significant Impact:** The project does not involve any uses that may create substantial temporary or periodic increases in ambient noise levels in the project vicinity including but not limited to extractive industry; outdoor commercial or industrial uses

that involve crushing, cutting, drilling, grinding, or blasting of raw materials; truck depots, transfer stations or delivery areas; or outdoor sound systems.

Also, general construction noise is not expected to exceed the construction noise limits of the County of San Diego Noise Ordinance (Section 36-410), which are derived from State regulations to address human health and quality of life concerns. Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, it is not anticipated that the project will operate construction equipment in excess of 75 dB for more than an 8 hours during a 24-hour period. Therefore, the project would not result in a substantial temporary or periodic increase in existing ambient noise levels in the project vicinity.

,	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Potentially Significant Impact		Less than Significant Impact
Less Than Significant With Mitigation Incorporated	$\overline{\checkmark}$	No Impact

Discussion/Explanation:

**No Impact:** Based on the service availability forms received for the project, the proposed project will not result in the need for significantly altered services or facilities. Service availability forms have been provided which indicate existing services are available to the project from the following agencies/districts: Mountain Empire Unified School District and Pine Valley Fire Protection District. The project does not involve the construction of new or physically altered governmental facilities including but not limited to fire protection facilities, sheriff facilities, schools, or parks in order to maintain acceptable service ratios, response times or other performance service ratios or objectives for any public services. Therefore, the project will not have an adverse physical effect on the environment because the project does not require new or significantly altered services or facilities to be constructed.

## XV. RECREATION

a)	C	Nould the project increase the use of exor other recreational facilities such that sacility would occur or be accelerated?	_	· · · · · · · · · · · · · · · · · · ·
		Potentially Significant Impact	$\checkmark$	Less than Significant Impact
		Less Than Significant With Mitigation Incorporated		No Impact

Discussion/Explanation:

Less Than Significant Impact: The project involves a residential minor subdivision that will increase the use of existing neighborhood and regional parks or other recreational facilities. To avoid substantial physical deterioration of local recreation facilities the project will be required to pay fees or dedicate land for local parks to the County pursuant to the Park Land Dedication Ordinance (PLDO). The Park Land Dedication Ordinance (PLDO) is the mechanism that enables the funding or dedication of local parkland in the County. The PLDO establishes several methods by which developers may satisfy their park requirements. Options include the payment of park

fees, the dedication of a public park, the provision of private recreational facilities, or a combination of these methods. PLDO funds must be used for the acquisition, planning, and development of local parkland and recreation facilities. Local parks are intended to serve the recreational needs of the communities in which they are located. The proposed project opted to pay park fees. Therefore, the project meets the requirements set forth by the PLDO for adequate parkland dedication and thereby reducing impacts, including cumulative impacts to local recreational facilities. The project will not result in significant cumulative impacts, because all past, present and future residential projects are required to comply with the requirements of PLDO. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

With regard to regional recreational facilities, there are over 21,765 acres of regional parkland owned by the County, which exceeds the General Plan standard of 15 acres per 1,000 population. In addition, there are over one million acres of publicly owned land in San Diego County dedicated to parks or open space including Federal lands, State Parks, special districts, and regional river parks. Due to the extensive acreage of existing publicly owned lands that can be used for recreation, the project will not result in substantial physical deterioration of regional recreational facilities or accelerate the deterioration of regional parkland. Moreover, the project will not result in a cumulatively considerable deterioration or accelerated deterioration of regional recreation facilities because even with all past, present and future residential projects a significant amount of regional recreational facilities will be available to County residents.

b)	Does the project include recreational face expansion of recreational facilities, which on the environment?	cilities or require the construction or ch might have an adverse physical effect		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

**No Impact:** The project does not include recreational facilities or require the construction or expansion of recreational facilities. Therefore, the construction or expansion of recreational facilities cannot have an adverse physical effect on the environment.

# **XVI. TRANSPORTATION/TRAFFIC** -- Would the project:

a) Conflict with an applicable plan, ordinance or policy establishing measures of the effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths and mass transit?

	Potentially Significant Impact	Less than Significant Impact
V	Less Than Significant With Mitigation Incorporated	No Impact

Less Than Significant With Mitigation Incorporated: The County of San Diego Guidelines for Determining Significance for Traffic and Transportation (Guidelines) establish measures of effectiveness for the performance of the circulation system. These Guidelines incorporate standards from the County of San Diego Public Road Standards and Public Facilities Element (PFE), the County of San Diego Transportation Impact Fee Program and the Congestion Management Program.

The proposed project will result in an additional 48 ADT. However, the project will not have a direct impact related to a conflict with any performance measures establishing measures of effectiveness of the circulation system because the project trips do not exceed any of the County's Guidelines for Determining Significance for direct impacts related to Traffic and Transportation. As identified in the County's Guidelines for Determining Significance for Traffic and Transportation, the project trips would not result in a substantial increase in the number of vehicle trips, volume of capacity ratio on roads, or congestion at intersections in relation to existing conditions. In addition, the project would not conflict with policies related to non-motorized travel such as mass transit, pedestrian or bicycle facilities. Therefore, the project would not have a direct impact related to a conflict with policies establishing measures of the effectiveness for the performance of the circulation system.

The proposed project generates 48 ADT. These trips will be distributed on circulation element roadways in the County some of which currently or are projected to operate at inadequate levels of service. The County of San Diego has developed an overall programmatic solution that addresses existing and projected future road deficiencies in the unincorporated portion of San Diego County. The TIF program creates a mechanism to proportionally fund improvements to roadways necessary to mitigate potential cumulative impacts caused by traffic from future development. These new projects were based on SANDAG regional growth and land use forecasts, the SANDAG Regional Transportation Model was utilized to analyze projected build-out (year 2030) development conditions on the existing circulation element roadway network throughout the unincorporated area of the County. Based on the results of the traffic modeling, funding necessary to construct transportation facilities that will mitigate cumulative impacts from new development was identified. Existing roadway deficiencies will be corrected through improvement projects funded by other public funding sources, such as TransNet, gas tax, and grants. Potential cumulative impacts to the region's freeways have been addressed in SANDAG's Regional Transportation Plan (RTP). This plan, which considers freeway buildout over the next 30 years, will use funds from TransNet, State, and Federal funding to improve freeways to projected level of service objectives in the RTP.

These project trips therefore contribute to a potential significant cumulative impact and mitigation is required. The potential growth represented by this project was included in the growth projections upon which the TIF program is based. By ensuring TIF funds are spend for the specific roadway improvements identified in the TIF Program, the CEQA mitigation requirement is satisfied and the Mitigation Fee nexus is met. Therefore, payment of the TIF, which will be required at issuance of building permits, in combination with other components of the program described above, will mitigate potential cumulative traffic impacts to less than significant.

limi esta	ntilet with an applicable congestion manapplicable to level of service standards and transhible by the county congestion manapplicable?	vel de	mand measures, or other standards
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The designated congestion management agency for the San Diego region is SANDAG. SANDAG is responsible for preparing the Regional Transportation Plan (RTP) of which the Congestion Management Program (CMP) is an element to monitor transportation system performance, develop programs to address near- and long-term congestion, and better integrate land use and transportation planning decisions. The CMP includes a requirement for enhanced CEQA review applicable to certain large developments that generate an equivalent of 2,400 or more average daily vehicle trips or 200 or more peak hour vehicle trips. These large projects must complete a traffic analysis that identifies the project's impacts on CMP system roadways, their associated costs, and identify appropriate mitigation. Early project coordination with affected public agencies, the Metropolitan Transit System (MTS) and the North County Transit District (NCTD) is required to ensure that the impacts of new development on CMP transit performance measures are identified.

The project proposes an increase of 48 ADTs. The additional 48 ADTs from the proposed project do not exceed the 2400 trips (or 200 peak hour trips) required for study under the region's Congestion Management Program. Additionally, the project does not involve construction of any new buildings, nor does it propose a new primary use. The additional access or support structures will not generate ADTs on a daily basis. Therefore the project will not conflict with travel demand measures or other standards of the congestion management agency.

c)		Result in a change in air traffic patterns, evels or a change in location that result		•

e)	F	Result in inadequate emergency access	?	
		Potentially Significant Impact		Less than Significant Impact
		Less Than Significant With Mitigation Incorporated	$\overline{\checkmark}$	No Impact

**No Impact:** The proposed project will not result in inadequate emergency access. The project is not served by a dead-end road that exceeds the maximum cumulative length permitted by the San Diego County Consolidated Fire Code, therefore, the project has adequate emergency access. Additionally, roads used to access the proposed project site are up to County standards.

	Conflict with adopted policies, plans, or programs regarding public transit, bicycle, o pedestrian facilities, or otherwise decrease the performance or safety of sucl facilities?			
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Dis	cuss	ion/Explanation:		
Less Than Significant Impact: The proposed project is a four lot minor subdivision and will generate 48 ADT. Project implementation will not result in the construction of any road improvements or new road design features that would interfere with the provision of public transit, bicycle or pedestrian facilities. In addition, the project does not generate sufficient travel demand to increase demand for transit, pedestrian or bicycle facilities. Therefore, the project will not conflict with policies, plans, or programs regarding public transit, bicycle or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.				
XVII. UTILITIES AND SERVICE SYSTEMS Would the project:  a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?				
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
D:-		ion/Evaloration		

Less Than Significant Impact: The project proposes to discharge domestic waste to on-site wastewater systems (OSWS), also known as septic systems. The project involves four separate on-site wastewater systems located on each parcel. Discharged wastewater must conform to the Regional Water Quality Control Board's (RWQCB) applicable standards, including the Regional Basin Plan and the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are adequately designed, located, sized, spaced, constructed and maintained." The RWQCBs with jurisdiction over San Diego County have authorized the County of San Diego, Department of Environmental Health (DEH) to issue certain OSWS permits throughout the County and within the incorporated cities. DEH has reviewed the OSWS lay-out for the project pursuant to DEH, Land and Water Quality Division's, "On-site Wastewater Systems: Permitting Process and Design Criteria." DEH approved the project's OSWS on July 6, 2009. Therefore, the project is consistent with the wastewater treatment requirements of the RWQCB as determined by the authorized, local public agency.

b)	f	Require or result in the construction of ne facilities or expansion of existing facilities significant environmental effects?

d)		Have sufficient water supplies available tentitlements and resources, or are new o		
		Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact
		Less Than Significant With Mitigation Incorporated		No Impact

**Less Than Significant Impact:** The project will obtain water from on-site groundwater wells. A site-specific Residential Well Test Report prepared by Peterson Environmental Services, Inc. dated March 16, 2009, on file with the Department of Planning and Land Use as Environmental Review Number 03-15-006, indicates that adequate groundwater resources are available to serve the project without interfering substantially with the

production rate of nearby wells. As required by the County Groundwater Ordinance, acreage of each proposed lot is in compliance with the minimum parcel size requirement of 4 gross acres. In addition, a 34-year cumulative water balance of the project's tributary watershed was conducted by DPLU dated June 18, 2009. The water balance results indicate that groundwater resources are adequate when taking past projects, current projects, and probable future projects into account. Therefore, the project and project's basin when developed with probable future projects will have sufficient water supplies available.

e)	Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:		
<b>No Impact:</b> The proposed project will rely completely on an on-site wastewater system (septic system); therefore, the project will not interfere with any wastewater treatment provider's service capacity.			
f)	Be served by a landfill with sufficient per project's solid waste disposal needs?	mitted	d capacity to accommodate the
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: Implementation of the project will generate solid waste. All solid waste facilities, including landfills require solid waste facility permits to operate. In San Diego County, the County Department of Environmental Health, Local Enforcement Agency issues solid waste facility permits with concurrence from the California Integrated Waste Management Board (CIWMB) under the authority of the Public Resources Code (Sections 44001-44018) and California Code of Regulations Title 27, Division 2, Subdivision 1, Chapter 4 (Section 21440et seq.). There are five, permitted active landfills in San Diego County with remaining capacity. Therefore, there is sufficient existing permitted solid waste capacity to accommodate the project's solid waste disposal needs.

g)	Comply with federal, state, and local stawaste?	tutes	and regulations related to solid
	Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact

XVIII.	MANDATORY FINDINGS OF SIGNIFIC	ANCE	:
a)	Does the project have the potential to de substantially reduce the habitat of a fish wildlife population to drop below self-sus plant or animal community, substantially of a rare or endangered plant or animal major periods of California history or pre-	egrade or wil stainin reduction	the quality of the environment, dlife species, cause a fish or glevels, threaten to eliminate a ce the number or restrict the range minate important examples of the
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation		

Per the instructions for evaluating environmental impacts in this Initial Study, the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory were considered in the response to each question in sections IV and V of this form. In addition to project specific impacts, this evaluation considered the projects potential for significant cumulative effects. Resources that have been evaluated as significant would be potentially impacted by the project, particularly biological resources and cultural resources. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes the dedication of onsite biological open space, the purchase of offsite habitat and a data recovery program. As a result of this evaluation, there is no

substantial evidence that, after mitigation, significant effects associated with this project would result. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

,	considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

The following list of past, present and future projects were considered and evaluated as a part of this Initial Study:

PROJECT NAME	PERMIT/MAP NUMBER
PINE CREEK RANCH	TM 5236
PINE VALLEY PARK ESTATES	GPA 08-009, TM 5236
KENYON TPM	TPM 20857
TOP OF THE PINES LANE TPM	TPM 20951
GUATAY FELLOWSHIP AT PINE	P 71-104-04
PINE VALLEY PARK ESTATES	TM 5318

Per the instructions for evaluating environmental impacts in this Initial Study, the potential for adverse cumulative effects were considered in the response to each question in sections I through XVIII of this form. In addition to project specific impacts, this evaluation considered the projects potential for incremental effects that are cumulatively considerable. As a result of this evaluation, there were determined to be potentially significant cumulative effects related to biological resources, cultural resources and traffic. However, mitigation has been included that clearly reduces these cumulative effects to a level below significance. This mitigation includes the dedication of onsite biological open space, the purchase of offsite habitat, a data recovery program and payment of the TIF. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are cumulative effects associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

,	Does the project have environmental eff adverse effects on human beings, either	
□	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

In the evaluation of environmental impacts in this Initial Study, the potential for adverse direct or indirect impacts to human beings were considered in the response to certain questions in sections I. Aesthetics, III. Air Quality, VI. Geology and Soils, VII. Hazards and Hazardous Materials, VIII Hydrology and Water Quality XI. Noise, XII. Population and Housing, and XV. Transportation and Traffic. As a result of this evaluation, there were determined to be potentially significant effects to human beings related to the following: traffic. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes payment of the TIF. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are adverse effects to human beings associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.
